Clinical Simulation Outcomes (MSK & Neuro Physiotherapy)

By the end of the clinical simulation session, students will be able to:

Assessment & Clinical Skills

- Conduct a structured subjective assessment for MSK and neurological patients
- Perform a focused objective assessment including posture, movement, strength, balance, and gait
- Identify key impairments relevant to MSK (e.g. posture, mobility, pain) and Neuro practice (e.g. weakness, tone, balance, gait)

Clinical Reasoning

- Link patient history, posture, and movement findings to symptoms
- Demonstrate clinical reasoning for both MSK and neurological presentations
- Identify red flags and apply safe decision-making

Treatment Planning

- Formulate appropriate treatment goals based on assessment findings
- Select and justify initial management strategies for MSK and Neuro patients
- Adapt interventions based on patient response and safety

Communication & Professional Practice

- Communicate clearly and confidently with patients
- Explain assessments and exercises in patient-friendly language
- Demonstrate professional behaviour, consent-taking, and safety awareness
- Reflect on performance and receive constructive feedback

Clinical Simulation Timetable (2:00 pm – 5:00 pm)

2:00 – 2:15 pm | Introduction & Orientation

- Welcome and overview of the session
- Learning objectives explained
- Safety expectations and professional standards
- Brief overview of MSK vs Neuro clinical reasoning

2:15 – 3:15 pm | MSK Clinical Simulation

- Student-led subjective assessment (e.g. neck, back, posture-related pain)
- Focused objective assessment
- Identification of key problems
- Discussion of clinical reasoning
- Outline of initial management plan
- Tutor-led feedback and reflection

3:15 – 3:25 pm | Break

3:25 – 4:25 pm | Neuro Clinical Simulation

- Student-led subjective assessment (e.g. stroke, balance, gait difficulties)
- Observation of posture, balance, and gait
- Identification of impairments and safety concerns
- Clinical reasoning discussion
- Initial treatment planning and safety strategies
- Tutor-led feedback and reflection

4:25 – 5:00 pm | Consolidation & Reflection

- Student reflection on strengths and areas for improvement
  Discussion if the student has any querry and the key takeaways
