Calculate Stride Characteristics

Self-Selected Speed

Measure distance walked _____ (m), Time to traverse distance_____(sec), # of steps taken_____

Calculations:

- Velocity (m/min or m/sec) = Distance_____(m) / time (s) = _____ m/sec _____ %N
  (x 60 sec/min) = _____ m/min
- Cadence (steps/minute) = #steps_____/ time(sec) x (60 sec/min) _____ steps/min _____ %N
- Stride Length (meters) = Velocity_____(m/min) / ½ #steps/min_____= meters/stride _____ %N

Note: 2 steps=1 stride - therefore divide by ½ #steps per minute
