PRACTICAL HANDBOOK

PT4052 - PT7004 PRACTICAL:

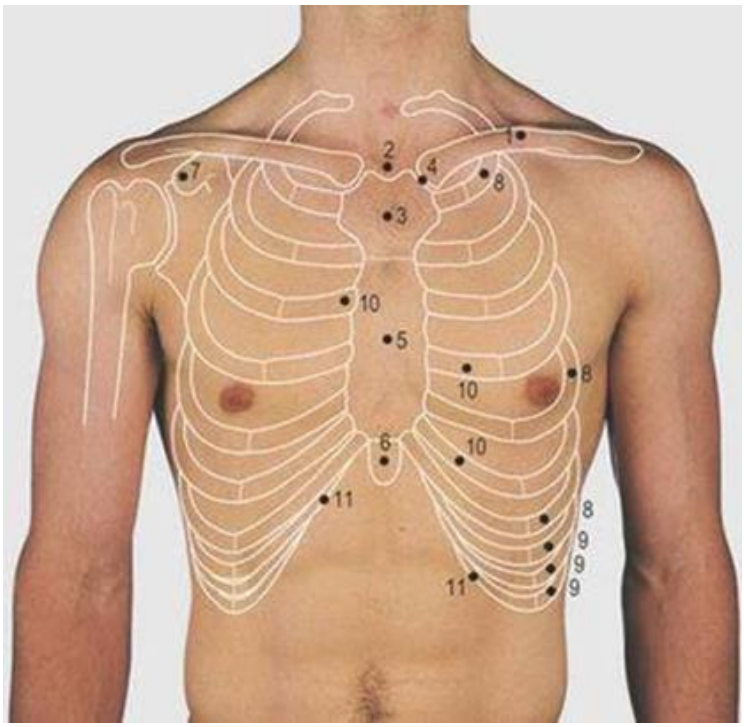

CARDIO: Surface marking and auscultation

Date: Tue 12/11/2024 **Time: 14:00 – 15:30 & 15:30 -17:00**

Learning Outcomes:

- Outline the surface markings of the lungs and lung fissures and pleura
- Use a stethoscope to perform auscultation
- Describe normal breath sounds to peers
- Record normal breath sounds in clinical note form

Identify the (**palpable**) Bony landmarks :

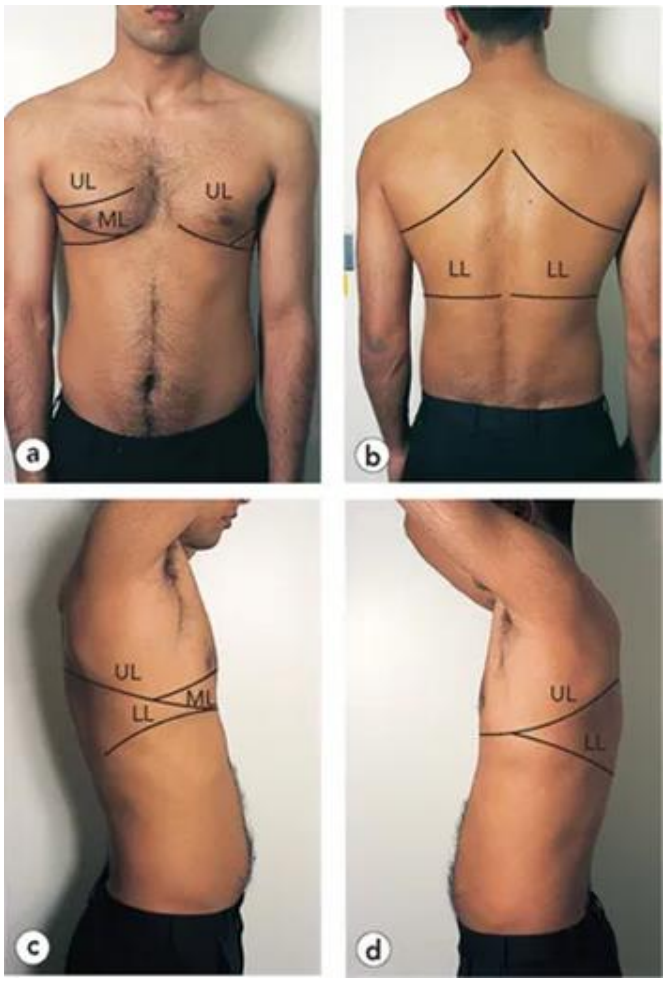

Anterior:

1. Clavicle
2. Suprasternal notch
3. **Manubrium**
    - **including the manubriosternal joint (angle of louis)**
4. Sternoclavicular joint
5. **Body of sternum**
6. **Xiphoid process / Xiphisternum**
7. Coracoid process
8. **True ribs (1-7)**
9. **False ribs (floating ribs)**
10. Costal cartilages
11. Costal margins

Here are some helpful Youtube videos with examples of how to use your Bony landmarks to guide your surface marking :

- Surface Anatomy of the Lungs - YouTube
- Surface Anatomy of the Respiratory System - YouTube
- Surface marking of lung - YouTube

The 3 rules of Good Auscultation :

- Skin to stethoscope not through clothes
- Listen to all lobes
- Compare both sides

Breath sound examples :

- Lung sounds (respiratory auscultation sounds) - YouTube
- Complete Breath sounds: Normal/Abnormal Lung Sounds, Types & Conditions - YouTube

Self-directed learning:

- Practice surface marking on your peers, I recommend using an eye liner pencil
- Practice auscultation on yourself and your peers

Listen to the lung sounds and make a list in your revision of the different pathologies that can be associated with them.
